

Recombinant Human RORC Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. RORC-5473H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	RORC MS Standard C13 and N15-labeled recombinant protein (NP_005051) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a DNA-binding transcription factor and is a member of the NR1 subfamily of nuclear hormone receptors. The specific functions of this protein are not known; however, studies of a similar gene in mice have shown that this gene may be essential for lymphoid organogenesis and may play an important regulatory role in thymopoiesis. In addition, studies in mice suggest that the protein encoded by this gene may inhibit the expression of Fas ligand and IL2. Two transcript variants encoding different isoforms have been found for this gene.
