

Recombinant Human PROS1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PROS1-5636H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PROS1 MS Standard C13 and N15-labeled recombinant protein (NP_000304) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a vitamin K-dependent plasma protein that functions as a cofactor for the anticoagulant protease, activated protein C (APC) to inhibit blood coagulation. It is found in plasma in both a free, functionally active form and also in an inactive form complexed with C4b-binding protein. Mutations in this gene result in autosomal dominant hereditary thrombophilia. An inactive pseudogene of this locus is located at an adjacent region on chromosome 3. Alternative splicing results in multiple transcript variants encoding different isoforms that may undergo similar processing to generate mature protein.
