

Recombinant Human IGFBP2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. IGFBP2-5679H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	IGFBP2 MS Standard C13 and N15-labeled recombinant protein (NP_000588) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is one of six similar proteins that bind insulin-like growth factors I and II (IGF-I and IGF-II). The encoded protein can be secreted into the bloodstream, where it binds IGF-I and IGF-II with high affinity, or it can remain intracellular, interacting with many different ligands. High expression levels of this protein promote the growth of several types of tumors and may be predictive of the chances of recovery of the patient. Several transcript variants, one encoding a secreted isoform and the others encoding nonsecreted isoforms, have been found for this gene.
