

Recombinant Human TP53BP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TP53BP1-5803H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TP53BP1 MS Standard C13 and N15-labeled recombinant protein (NP_005648) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein that functions in the DNA double-strand break repair pathway choice, promoting non-homologous end joining (NHEJ) pathways, and limiting homologous recombination. This protein plays multiple roles in the DNA damage response, including promoting checkpoint signaling following DNA damage, acting as a scaffold for recruitment of DNA damage response proteins to damaged chromatin, and promoting NHEJ pathways by limiting end resection following a double-strand break. These roles are also important during V(D)J recombination, class switch recombination and at unprotected telomeres. Alternative splicing results in multiple transcript variants encoding different isoforms.
