

Recombinant Human FARP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. FARP1-5822H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	FARP1 MS Standard C13 and N15-labeled recombinant protein (NP_005757) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein containing a FERM (4.2, exrin, radixin, moesin) domain, a Dbl homology domain, and two pleckstrin homology domains. These domains are found in guanine nucleotide exchange factors and proteins that link the cytoskeleton to the cell membrane. The encoded protein functions in neurons to promote dendritic growth. Alternative splicing results in multiple transcript variants.
Molecular Mass	118.5 kDa
