

Recombinant Human ANKHD1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ANKHD1-5946H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ANKHD1 MS Standard C13 and N15-labeled recombinant protein (NP_078944) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein with multiple ankyrin repeat domains and a single KH-domain. The protein is thought to function as a scaffolding protein, and it may be involved in the regulation of caspases and thereby play an antiapoptotic role in cell survival. Alternative splicing results in multiple transcript variants, one of which generates a fusion transcript (MASK-BP3) with the downstream eIF4E-binding protein 3 (EIF4EBP3) gene, resulting in a protein comprised of the ANKHD1 sequence for the majority of the protein and a different C-terminus due to an alternate reading frame for the EIF4EBP3 segments.
