

Recombinant Human BMP6 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. BMP6-5977H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	BMP6 MS Standard C13 and N15-labeled recombinant protein (NP_001709) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is proteolytically processed to generate each subunit of the disulfide-linked homodimer. This protein regulates a wide range of biological processes including iron homeostasis, fat and bone development, and ovulation. Differential expression of this gene may be associated with progression of breast and prostate cancer. Mutations in this gene may be associated with iron overload in human patients.
