

Recombinant Human ACSL4 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ACSL4-5997H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ACSL4 MS Standard C13 and N15-labeled recombinant protein (NP_075266) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is an isozyme of the long-chain fatty-acid-coenzyme A ligase family. Although differing in substrate specificity, subcellular localization, and tissue distribution, all isozymes of this family convert free long-chain fatty acids into fatty acyl-CoA esters, and thereby play a key role in lipid biosynthesis and fatty acid degradation. This isozyme preferentially utilizes arachidonate as substrate. The absence of this enzyme may contribute to the cognitive disability or Alport syndrome. Alternative splicing of this gene generates multiple transcript variants.
