

Recombinant Human GYG2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GYG2-6037H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GYG2 MS Standard C13 and N15-labeled recombinant protein (NP_001073324) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the the glycogenin family. Glycogenin is a self-glucosylating protein involved in the initiation reactions of glycogen biosynthesis. A gene on chromosome 3 encodes the muscle glycogenin and this X-linked gene encodes the glycogenin mainly present in liver; both are involved in blood glucose homeostasis. This gene has a short version on chromosome Y, which is 3' truncated and can not make a functional protein. Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
