

Recombinant Human LMBR1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. LMBR1-6118H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	LMBR1 MS Standard C13 and N15-labeled recombinant protein (NP_071903) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the LMBR1-like membrane protein family. Another member of this protein family has been shown to be a lipocalin transmembrane receptor. A highly conserved, cis-acting regulatory module for the sonic hedgehog gene is located within an intron of this gene. Consequently, disruption of this genic region can alter sonic hedgehog expression and affect limb patterning, but it is not known if this gene functions directly in limb development. Mutations and chromosomal deletions and rearrangements in this genic region are associated with acheiropody and preaxial polydactyly, which likely result from altered sonic hedgehog expression.
