

Recombinant Human APLNR Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. APLNR-6124H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	APLNR MS Standard C13 and N15-labeled recombinant protein (NP_005152) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the G protein-coupled receptor gene family. The encoded protein is related to the angiotensin receptor, but is actually an apelin receptor that inhibits adenylate cyclase activity and plays a counter-regulatory role against the pressure action of angiotensin II by exerting hypertensive effect. It functions in the cardiovascular and central nervous systems, in glucose metabolism, in embryonic and tumor angiogenesis and as a human immunodeficiency virus (HIV-1) coreceptor. Two transcript variants resulting from alternative splicing have been identified.
Molecular Mass	42.7 kDa
