

Recombinant Human NAB2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. NAB2-6330H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NAB2 MS Standard C13 and N15-labeled recombinant protein (NP_005958) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the family of NGFI-A binding (NAB) proteins, which function in the nucleus to repress transcription induced by some members of the EGR (early growth response) family of transactivators. NAB proteins can homo- or hetero-multimerize with other EGR or NAB proteins through a conserved N-terminal domain, and repress transcription through two partially redundant C-terminal domains. Transcriptional repression by the encoded protein is mediated in part by interactions with the nucleosome remodeling and deacetylase (NuRD) complex. Alternatively spliced transcript variants have been described, but their biological validity has not been determined.
