

Recombinant Human CTPS2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CTPS2-6360H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CTPS2 MS Standard C13 and N15-labeled recombinant protein (NP_787055) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene catalyzes the formation of CTP from UTP with the concomitant deamination of glutamine to glutamate. This protein is the rate-limiting enzyme in the synthesis of cytosine nucleotides, which play an important role in various metabolic processes and provide the precursors necessary for the synthesis of RNA and DNA. Cancer cells that exhibit increased cell proliferation also exhibit an increased activity of this encoded protein. Thus, this protein is an attractive target for selective chemotherapy. Alternative splicing results in multiple transcript variants.
