

Recombinant Human AMELX Protein, (AFPn)-His-TEV-tagged

Cat. No. AMELX-015H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Full-length mature human AMELX cDNA (17–191aa, isoforms-1, derived from BC064379) was constructed with codon optimization and expressed with a human Alpha-Fetal Protein N-terminal domain (AFPn)-His-TEV cleavage site (219aa) fusion at its N-terminal.
Species	Human
Source	E.coli
ProteinLength	17–191
Description	This gene encodes a member of the amelogenin family of extracellular matrix proteins. Amelogenins are involved in biomineralization during tooth enamel development. Mutations in this gene cause X-linked amelogenesis imperfecta. Alternative splicing results in multiple transcript variants encoding different isoforms.
