

Active Recombinant Human SERPING1 protein

Cat. No. SERPING1-108H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SERPING1(56–500 aa) was expressed in CHO.
Species	Human
Source	CHO
ProteinLength	56-500 a.a.
Description	C1 Inhibitor is a member of the serpin family of structurally related proteins, and is the primary regulator of the immune complement system. C1Inhibitor is a protease inhibitor that functions to inhibit the complement system in order to prevent over-activation or spontaneous activation. Inhibition is achieved by binding to and irreversibly inhibiting the C1r and C1s proteases of the C1 complex, which has the effect of shutting down all subsequent downstream events in the complement activation cascade. C1inhibitor can also inhibit various other proteases, including Kallikrein, Factor XIa, and Factor XIIa. Deficiencies in C1inhibitor are the primary cause of hereditary angioedema (HAE, hereditary angioneurotic edema), a disease characterized by edema in the respiratory and gastrointestinal tracts. In certain clinical situations, the direct administration of C1inhibitor can be used to treat HAE and certain other conditions.
Form	Sterile filtered through a 0.2 micron filter. Lyophilized from 10 mM Sodium Phosphate, PH 7.5.
Bio-activity	Measured by its ability to inhibit recombinant human complement component C1a

	cleavage of a colorimetric peptide substrate, N Carbobenzyloxy-Lys-ThioBenzyl ester (Z-K-SBzl). The expected IC50 is ≤ 2.6 nM.
Molecular Mass	Is a highly glycosylated glycoprotein containing 445 amino acid residues (49.4kDa). Glycosylated C1 Inhibitor migrates at an apparent molecular weight of approximately 80-90 kDa by SDS PAGE analysis under reducing conditions.
