

Active Recombinant Mouse Pspn Protein

Cat. No. Pspn-5209M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Purified recombinant protein of Mouse persephin (Pspn) without tag was expressed in E. coli.
Species	Mouse
Source	E.coli
Description	This gene encodes a secreted ligand of the GDNF (glial cell line-derived neurotrophic factor) subfamily and TGF-beta (transforming growth factor-beta) superfamily of proteins. The encoded preproprotein is proteolytically processed to generate the mature protein. This protein signals through the RET receptor tyrosine kinase and a GPI-linked coreceptor, and promotes survival of neuronal populations. This protein may play a role in cell death, and nervous system development and function. Mice lacking a functional copy of this gene exhibit hypersensitivity to cerebral ischemia.
Bio-activity	ED50 was determined by its ability to stimulate proliferation of human thyroid carcinoma cells (TT cells) is > 0.1 ng/mL, corresponding to a specific activity of > 1 × 10 ⁷ units/mg.
