| <b>Description</b>      | Rotavirus is a very contagious virus that causes diarrhea. It's the most common cause of diarrhea in infants and children worldwide, resulting in over 215,000 deaths annually. Before the development of a vaccine, most children in the United States had been infected with the virus at least once by age 5. |
| <b>Form</b>             | Liquid                                                                                                                                                                                                                                                                                                           |
| <b>Applications</b>     | Complement fixation test (CFT)                                                                                                                                                                                                                                                                                   |
| <b>Stability</b>        | 12 months                                                                                                                                                                                                                                                                                                        |
| <b>Storage</b>          | Store at -80 centigrade, avoid freeze/thaw cycles.                                                                                                                                                                                                                                                               |
| <b>Preservative</b>     | None                                                                                                                                                                                                                                                                                                             |
