

## Recombinant Human TNF Protein, His-tagged

**Cat. No.** TNF-151H    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Description</b>      | This gene encodes a multifunctional proinflammatory cytokine that belongs to the tumor necrosis factor (TNF) superfamily. This cytokine is mainly secreted by macrophages. It can bind to, and thus functions through its receptors TNFRSF1A/TNFR1 and TNFRSF1B/TNFR. This cytokine is involved in the regulation of a wide spectrum of biological processes including cell proliferation, differentiation, apoptosis, lipid metabolism, and coagulation. This cytokine has been implicated in a variety of diseases, including autoimmune diseases, insulin resistance, and cancer. Knockout studies in mice also suggested the neuroprotective function of this cytokine. |
| <b>Form</b>             | Purified protein formulated in a sterile solution of TBS buffer, pH7.46, without any preservatives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

**Applications**

Antigens, Western, ELISA and other in vitro binding or in vivo functional assays, and protein-protein interaction studies.

**GENE INFORMATION**
**Gene Name**

TNF tumor necrosis factor [ Homo sapiens ]

**Official Symbol**

TNF

**Synonyms**

TNF; tumor necrosis factor; TNFA, tumor necrosis factor (TNF superfamily, member 2); DIF; TNF superfamily, member 2; TNF alpha; TNFSF2; TNF- $\alpha$ ; cachectin; APC1 protein; TNF, monocyte-derived; TNF, macrophage-derived; TNF superfamily, member 2; tumor necrosis factor alpha; tumor necrosis factor-alpha; tumor necrosis factor ligand superfamily member 2; TNFA; TNF-alpha;

**Gene ID**

7124

**mRNA Refseq**

NM\_000594

**Protein Refseq**

NP\_000585

**MIM**

191160

**UniProt ID**

P01375
