

Recombinant Human PDCD1 Protein, DYKDDDDK-tagged

Cat. No. PDCD1-151H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human programmed cell death 1(PDCD1)(NM_005018) protein, with a DYKDDDDK tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	This gene encodes a cell surface membrane protein of the immunoglobulin superfamily. This protein is expressed in pro-B-cells and is thought to play a role in their differentiation. In mice, expression of this gene is induced in the thymus when anti-CD3 antibodies are injected and large numbers of thymocytes undergo apoptosis. Mice deficient for this gene bred on a BALB/c background developed dilated cardiomyopathy and died from congestive heart failure. These studies suggest that this gene product may also be important in T cell function and contribute to the prevention of autoimmune diseases.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.188, without any preservatives.
Molecular Mass	16.8kD
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
Purity	>90% by SDS-PAGE gel and Coomassie Blue staining
