

Recombinant Human MST1R Protein, His-tagged

Cat. No. MST1R-151H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human macrophage stimulating 1 receptor(MST1R) protein, transcript variant 1 (NM_002447), with a His tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	This gene encodes a cell surface receptor for macrophage-stimulating protein (MSP) with tyrosine kinase activity. The mature form of this protein is a heterodimer of disulfide-linked alpha and beta subunits, generated by proteolytic cleavage of a single-chain precursor. The beta subunit undergoes tyrosine phosphorylation upon stimulation by MSP. This protein is expressed on the ciliated epithelia of the mucociliary transport apparatus of the lung, and together with MSP, thought to be involved in host defense. Alternative splicing generates multiple transcript variants encoding different isoforms that may undergo similar proteolytic processing.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.277, without any preservatives.
Molecular Mass	149.7 kDa
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
Purity	>90% by SDS-PAGE gel and Coomassie Blue staining
