

Recombinant Human L1CAM Protein, His-tagged

Cat. No. L1CAM-151H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human L1 cell adhesion molecule(L1CAM) protein, transcript variant 1(NM_000425), with a His tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	The protein encoded by this gene is an axonal glycoprotein belonging to the immunoglobulin supergene family. The ectodomain, consisting of several immunoglobulin-like domains and fibronectin-like repeats (type III), is linked via a single transmembrane sequence to a conserved cytoplasmic domain. This cell adhesion molecule plays an important role in nervous system development, including neuronal migration and differentiation. Mutations in the gene cause X-linked neurological syndromes known as CRASH (corpus callosum hypoplasia, retardation, aphasia, spastic paraplegia and hydrocephalus). Alternative splicing of this gene results in multiple transcript variants, some of which include an alternate exon that is considered to be specific to neurons.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.307, without any preservatives.
Molecular Mass	137.8 kDa
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
