

Recombinant Human CD59 Protein, DYKDDDDK-tagged

Cat. No. CD59-151H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human CD59 molecule(CD59), transcript variant 2(NM_000611), with a DYKDDDDK tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	This gene encodes a cell surface glycoprotein that regulates complement-mediated cell lysis, and it is involved in lymphocyte signal transduction. This protein is a potent inhibitor of the complement membrane attack complex, whereby it binds complement C8 and/or C9 during the assembly of this complex, thereby inhibiting the incorporation of multiple copies of C9 into the complex, which is necessary for osmolytic pore formation. This protein also plays a role in signal transduction pathways in the activation of T cells. Mutations in this gene cause CD59 deficiency, a disease resulting in hemolytic anemia and thrombosis, and which causes cerebral infarction. Multiple alternatively spliced transcript variants, which encode the same protein, have been identified for this gene.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.138, without any preservatives.
Molecular Mass	11.6 kDa
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
