

Recombinant Human CD53 Protein, His-tagged

Cat. No. CD53-151H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human CD53 molecule(CD53), transcript variant 2(NM_000560), with a His tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with integrins. It contributes to the transduction of CD2-generated signals in T cells and natural killer cells and has been suggested to play a role in growth regulation. Familial deficiency of this gene has been linked to an immunodeficiency associated with recurrent infectious diseases caused by bacteria, fungi and viruses. Alternative splicing results in multiple transcript variants.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.141, without any preservatives.
Molecular Mass	24.2 kDa
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
