

Recombinant Human CA9 Protein, DYKDDDDK-tagged

Cat. No. CA9-151H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human carbonic anhydrase 9(CA9)(NM_001216), with a DYKDDDDK tag, was expressed in human cells.
Species	Human
Source	Human Cells
ProteinLength	1-459 aa
Description	Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption, and the formation of aqueous humor, cerebrospinal fluid, saliva, and gastric acid. They show extensive diversity in tissue distribution and in their subcellular localization. CA IX is a transmembrane protein and is one of only two tumor-associated carbonic anhydrase isoenzymes known. It is expressed in all clear-cell renal cell carcinoma, but is not detected in normal kidney or most other normal tissues. It may be involved in cell proliferation and transformation. This gene was mapped to 17q21.2 by fluorescence in situ hybridization, however, radiation hybrid mapping localized it to 9p13-p12.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.331, without any preservatives.
Molecular Mass	45.8 kDa
