

Recombinant Human ABCB1 Protein, His-tagged

Cat. No. ABCB1-115H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ATP binding cassette subfamily B member 1(ABCB1), transcript variant 3(NM_000927), with a His tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Members of the MDR/TAP subfamily are involved in multidrug resistance. The protein encoded by this gene is an ATP-dependent drug efflux pump for xenobiotic compounds with broad substrate specificity. It is responsible for decreased drug accumulation in multidrug-resistant cells and often mediates the development of resistance to anticancer drugs. This protein also functions as a transporter in the blood-brain barrier.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.222, without any preservatives.
Molecular Mass	141.3 kDa
