

Recombinant Human PTGS1 Protein, His-tagged

Cat. No. PTGS1-045H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant N-terminal His-tagged full-length human PTGS1 protein (24-599) was expressed using the baculovirus system.
Species	Human
Source	Insect Cells
ProteinLength	24-599
Description	This is one of two genes encoding similar enzymes that catalyze the conversion of arachinodate to prostaglandin. The encoded protein regulates angiogenesis in endothelial cells, and is inhibited by nonsteroidal anti-inflammatory drugs such as aspirin. Based on its ability to function as both a cyclooxygenase and as a peroxidase, the encoded protein has been identified as a moonlighting protein. The protein may promote cell proliferation during tumor progression. Alternative splicing results in multiple transcript variants.
Molecular Mass	~70 kDa
Purity	≥85% estimated by SDS-PAGE
Unit Definition	One unit is defined as the amount of enzyme required to consume 1 nmol of oxygen per minute at 37 centigrade in 100 mM Tris, pH8.0, containing 100 μM arachidonate, 5 mM EDTA, 2 mM phenol, and 1 μM hematin.
