

Recombinant Human SPHK1 Protein, His-tagged

Cat. No. SPHK1-091H Lot. No. (See product label)

SPECIFICATION

Product Overview	Active human recombinant N-terminal His-tagged SPHK1 protein from Sf9 cells.
Species	Human
Source	Insect Cells
Description	The protein encoded by this gene catalyzes the phosphorylation of sphingosine to form sphingosine-1-phosphate (S1P), a lipid mediator with both intra- and extracellular functions. Intracellularly, S1P regulates proliferation and survival, and extracellularly, it is a ligand for cell surface G protein-coupled receptors. This protein, and its product S1P, play a key role in TNF-alpha signaling and the NF-kappa-B activation pathway important in inflammatory, antiapoptotic, and immune processes. Phosphorylation of this protein alters its catalytic activity and promotes its translocation to the plasma membrane. Alternative splicing results in multiple transcript variants encoding different isoforms.
