

Recombinant Human HDAC6 Protein, GST-tagged

Cat. No. HDAC6-096H Lot. No. (See product label)

SPECIFICATION

Product Overview	Full-length recombinant N-terminal GST-tagged human HDAC6 protein was expressed in Sf9 cells.
Species	Human
Source	Insect Cells
Description	Histones play a critical role in transcriptional regulation, cell cycle progression, and developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription factor access to DNA. The protein encoded by this gene belongs to class II of the histone deacetylase/acuc/apha family. It contains an internal duplication of two catalytic domains which appear to function independently of each other. This protein possesses histone deacetylase activity and represses transcription.
