

Recombinant Human MGLL Protein, His-tagged

Cat. No. MGLL-103H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active full length human recombinant C-terminal His-tagged MGLL protein (2-313) was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	2-313
Description	This gene encodes a serine hydrolase of the AB hydrolase superfamily that catalyzes the conversion of monoacylglycerides to free fatty acids and glycerol. The encoded protein plays a critical role in several physiological processes including pain and nociperception through hydrolysis of the endocannabinoid 2-arachidonoylglycerol. Expression of this gene may play a role in cancer tumorigenesis and metastasis. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
Molecular Mass	39 kDa
Purity	≥95% as determined by SDS-PAGE
Unit Definition	One unit of enzyme will produce 1 μmol of 4-nitrophenol per minute at 25 centigrade in 10 mM Tris, pH 7.2, 1 mM EDTA using 1.5 μM 4-nitrophenylacetate as substrate, measured by absorbance at 412 nm.
