

Active Recombinant Human SETD7 Protein, His-tagged

Cat. No. SETD7-129H Lot. No. (See product label)

SPECIFICATION

Product Overview	Active recombinant N-terminal His-tagged full-length human SET7/9 protein (1-366) was purified from E. coli.
Species	Human
Source	E.coli
ProteinLength	1-366
Description	Histone methyltransferase that specifically monomethylates 'Lys-4' of histone H3. H3 'Lys-4' methylation represents a specific tag for epigenetic transcriptional activation. Plays a central role in the transcriptional activation of genes such as collagenase or insulin. Recruited by IPF1/PDX-1 to the insulin promoter, leading to activate transcription. Has also methyltransferase activity toward non-histone proteins such as p53/TP53, TAF10, and possibly TAF7 by recognizing and binding the [KR]-[STA]-K in substrate proteins. Monomethylates 'Lys-189' of TAF10, leading to increase the affinity of TAF10 for RNA polymerase II. Monomethylates 'Lys-372' of p53/TP53, stabilizing p53/TP53 and increasing p53/TP53-mediated transcriptional activation.
Bio-activity	Activity was determined using 50µM human TAF10 peptide (amino acids 186-195) (Ac) SKSKDRKYTL at 37 centigrade using a Methyltransferase Colorimetric Assay Kit.
Molecular Mass	43.3 kDa
