| <b>Product Overview</b> | Recombinant 2019-nCoV Spike protein S1 (P681H) (16-685) was expressed in CHO cells using a C-terminal His-tag.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Description</b>      | <p>The spike (S) glycoprotein of coronaviruses is known to be essential in the binding of the virus to the host cell at the advent of the infection process. Most notable is severe acute respiratory syndrome (SARS). The severe acute respiratory syndrome-coronavirus (SARS-CoV) spike (S) glycoprotein alone can mediate the membrane fusion required for virus entry and cell fusion. It is also a major immunogen and a target for entry inhibitors. The SARS-CoV-2 spike (S) protein is composed of two subunits; the S1 subunit contains a receptor-binding domain that engages with the host cell receptor angiotensin-converting enzyme 2 and the S2 subunit mediates fusion between the viral and host cell membranes. The S RBD protein plays key parts in the induction of neutralizing-antibody and T-cell responses, as well as protective immunity, during infection with SARS-CoV-2 (2019-nCoV) as in recent COVID-19 outbreak.</p> |
| <b>Molecular Mass</b>   | 130 kDa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Applications</b>   | ELISA                                                                                                                                                                                                                                             |
| <b>Stability</b>      | One year at -70 centigrade from date of shipment.                                                                                                                                                                                                 |
| <b>Storage</b>        | Store product at –70 centigrade. For optimal storage, aliquot targets into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles. |
| <b>Concentration</b>  | 0.5 µg/µL                                                                                                                                                                                                                                         |
| <b>Storage Buffer</b> | Recombinant protein stored in 50mM sodium phosphate, pH 7.5, 300mM NaCl, 150mM imidazole.                                                                                                                                                         |
| <b>Shipping</b>       | Dry ice                                                                                                                                                                                                                                           |

## Activity

Binding of human ACE2 (19-740) protein to immobilized 2019-nCoV Spike Protein S1 (P618H) was determined by functional ELISA.

## SDS-PAGE

The purity of nCoV-S1 (P618H) was determined to be 90% by densitometry, observed approx. MW 130 kDa.
