SPECIFICATION

Product Overview	Recombinant full-length 2019-nCoV NSP8 was expressed in E. coli using a C-terminal His tag.
Species	Sars-Cov-2
Source	E.coli
Description	Novel coronavirus SARS-CoV-2 has caused the pandemic of the respiratory diseases (COVID-19) around the world in 2020. Coronavirus RNA genome encodes a complex replication machinery consisting of 16 viral non-structural proteins (NSPs). NSP7 and NSP8 stabilize regions of NSP12 (RNA-dependent RNA polymerase; RdRp) involved in RNA binding and are essential for a highly active NSP12 polymerase complex. NSP7 has been suggested to confer RNA-binding properties to the trimeric polymerase complex. NSP8 has been shown to act as an oligo(U)-templated polyadenylyltransferase and a robust (mono/oligo) adenylate transferase. The NSP7/NSP8/NSP12 polymerase complex associates with NSP14 which is required to safeguard coronavirus replication fidelity
