

Recombinant Human COMP Protein, His-tagged

Cat. No. COMP-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human COMP (21-757aa), fused to His-tag at C-terminus, was expressed in HEK293 cell and purified by using conventional chromatography techniques.
Species	Human
Source	HEK293
ProteinLength	21-757 a.a.
Description	The protein encoded by this gene is a noncollagenous extracellular matrix (ECM) protein. It consists of five identical glycoprotein subunits, each with EGF-like and calcium-binding (thrombospondin-like) domains. Oligomerization results from formation of a five-stranded coiled coil and disulfides. Binding to other ECM proteins such as collagen appears to depend on divalent cations. Contraction or expansion of a 5 aa aspartate repeat and other mutations can cause pseudochoondroplasia (PSACH) and multiple epiphyseal dysplasia (MED).
