| <b>Product Overview</b> | Recombinant human KRAS (G12C) (2-186) was expressed in E. coli cells using an N-terminal His tag. The KRAS (G12C) mutant is constitutively active.                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Description</b>      | This gene, a Kirsten ras oncogene homolog from the mammalian ras gene family, encodes a protein that is a member of the small GTPase superfamily. A single amino acid substitution is responsible for an activating mutation. The transforming protein that results is implicated in various malignancies, including lung adenocarcinoma, mucinous adenoma, ductal carcinoma of the pancreas and colorectal carcinoma. Alternative splicing leads to variants encoding two isoforms that differ in the C-terminal region. |
| <b>Molecular Mass</b>   | 23 kDa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Stability</b>        | One year at -70 centigrade from date of shipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Storage</b>          | Store product at -70 centigrade. For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles.                                                                                                                                                                                                                                                                          |

Purity

The purity of KRAS (G12C) was determined to be >75% by densitometry.
