

Recombinant Human DGKG Protein, His-tagged

Cat. No. DGKG-01H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant full-length isoform 1 of human Diacylglycerol kinase gamma (DGKG) was expressed by baculovirus in Sf9 insect cells using an N-terminal His tag.
Species	Human
Source	Insect Cells
Description	This gene encodes an enzyme that is a member of the type I subfamily of diacylglycerol kinases, which are involved in lipid metabolism. These enzymes generate phosphatidic acid by catalyzing the phosphorylation of diacylglycerol, a fundamental lipid second messenger that activates numerous proteins, including protein kinase C isoforms, Ras guanyl nucleotide-releasing proteins and some transient receptor potential channels. Diacylglycerol kinase gamma has been implicated in cell cycle regulation and in the negative regulation of macrophage differentiation in leukemia cells. Multiple transcript variants encoding different isoforms have been found for this gene.
Molecular Mass	97 kDa
Purity	> 90%
Applications	Kinase Assay
Stability	One year at -70 centigrade from date of shipment.
