

Recombinant DENV4 E Protein, His-tagged

Cat. No. E-08D **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Dengue virus serotype 4 E protein expressed in insect cells (Baculovirus) with C-terminal His-tag, greater than 95% purity. Dengue virus serotype 4 Envelope protein is engineered in insect cells using state-of-the-art baculovirus expression and purification techniques.
Species	DENV4
Source	Insect Cells
Description	Dengue virus is a member of the flavivirus family, which includes Zika virus, West Nile virus and Japanese Encephalitis virus. Many of the proteins expressed by these viruses are very similar, and serological testing for these viruses can be complicated by problems of cross-reactivity. In this context, the use of highly purified antigens, that are glycosylated and folded as native proteins can be highly important in the development of accurate immunoassays.
