

Recombinant EBV VCA p18 Protein

Cat. No. p18-23E **Lot. No.** (See product label)

SPECIFICATION

Product Overview	This recombinant protein contains full length of EBV VCA p18 protein with a calculated MW of 19.8 kDa. It is recognized by positive samples in ELISA tests.
Species	EBV
Source	E.coli
Description	The Epstein-Barr virus (EBV), also called Human herpes virus 4 (HHV-4), is a virus of the herpes family (which includes Herpes simplex virus and Cytomegalo virus. On infecting the B-lymphocyte, the linear virus genome circularizes and the virus subsequently persists within the cell as an episome. The virus can execute several distinct programs of gene expression which can be broadly categorized as being lytic cycle or latent cycle. The lytic cycle or productive infection results in staged expression of a host of viral proteins with the ultimate objective of producing infectious virions. Formally, this phase of infection does not inevitably lead to lysis of the host cell as EBV virions are produced by budding from the infected cell. The latent cycle (lysogenic) programs are those that do not result in production of virions.
Form	Affinity purified, liquid
Molecular Mass	19.8 kDa
Purity	>95% pure by SDS-PAGE
Applications	Suitable for use in ELISA, Lateral Flow, WB, and other immune tests.
