

Recombinant Human DMD Protein, DYKDDDDK-tagged

Cat. No. DMD-36H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant protein from the full-length sequence of Homo sapiens dystrophin (DMD), transcript variant Dp140b (NM_004021), with a DYKDDDDK tag was expressed in human cells.
Species	Human
Source	Human Cells
Description	This gene spans a genomic range of greater than 2 Mb and encodes a large protein containing an N-terminal actin-binding domain and multiple spectrin repeats. The encoded protein forms a component of the dystrophin-glycoprotein complex (DGC), which bridges the inner cytoskeleton and the extracellular matrix. Deletions, duplications, and point mutations at this gene locus may cause Duchenne muscular dystrophy (DMD), Becker muscular dystrophy (BMD), or cardiomyopathy. Alternative promoter usage and alternative splicing result in numerous distinct transcript variants and protein isoforms for this gene.
Molecular Mass	143 kDa
Endotoxin	< 0.1 ng/ µg of protein (< 1 EU/ µg)
Purity	> 90% by SDS-PAGE gel and Coomassie Blue staining
Applications	Antigens, Western, ELISA and other in vitro binding or in vivo functional assays, and protein-protein interaction studies; For research & development use only!
