

# Recombinant Mouse Havcr2 Protein, His-tagged, Alexa Fluor 647 conjugated

**Cat. No.** HAVCR2-529MAF647    **Lot. No.** (See product label)

## SPECIFICATION

|                                     |                                                                                                                                                                                                                                          |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b>             | Alexa Fluor 647 conjugated recombinant Mouse Havcr2 (AAL65156.1) (Met1-Arg191), fused with a C-terminal polyhistidine tag, was produced in Human Cells.                                                                                  |
| <b>Species</b>                      | Mouse                                                                                                                                                                                                                                    |
| <b>Source</b>                       | HEK293                                                                                                                                                                                                                                   |
| <b>ProteinLength</b>                | 181                                                                                                                                                                                                                                      |
| <b>Form</b>                         | Lyophilized                                                                                                                                                                                                                              |
| <b>Molecular Mass</b>               | The recombinant mouse HAVCR2 comprises 181 amino acids and has a predicted molecular mass of 20.3 kDa. The apparent molecular mass of the protein is approximately 37-47 kDa in SDS-PAGE under reducing conditions due to glycosylation. |
| <b>N-terminal Sequence Analysis</b> | Leu 22                                                                                                                                                                                                                                   |
| <b>Endotoxin</b>                    | < 1.0 EU/ µg of the protein as determined by the LAL method.                                                                                                                                                                             |
| <b>Purity</b>                       | > 95 % as determined by SDS-PAGE                                                                                                                                                                                                         |
| <b>Characteristic</b>               | Disulfide-linked homodimer                                                                                                                                                                                                               |

|                       |                                                                                                                                                                           |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | <p>Labeled with Alexa Fluor 647 via amines</p> <p>Excitation = 650 nm</p> <p>Emission = 668 nm</p>                                                                        |
| <b>Stability</b>      | Samples are stable for up to 12 months from date of receipt at -70 centigrade.                                                                                            |
| <b>Storage</b>        | Store it under sterile conditions at -20 to -70 centigrade. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.       |
| <b>Storage Buffer</b> | Lyophilized from sterile PBS, pH 7.4. Normally 5%-8% trehalose and mannitol are added as protectants before lyophilization.                                               |
| <b>Reconstitution</b> | It is recommended that sterile water be added to the vial to prepare a stock solution. Centrifuge the vial at 4 centigrade before opening to recover the entire contents. |
| <b>Conjugation</b>    | Alexa Fluor 647                                                                                                                                                           |
