

Active Recombinant Equine IL4

Cat. No. IL4-256E **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Equine IL-4 was produced in yeast and therefore does not have endotoxin, is naturally folded, and post-translationally modified.
Species	Equine
Source	Yeast
Description	Interleukin-4 (IL-4) induces differentiation of naive helper T cells (Th0 cells) to Th2 cells. Upon activation by IL-4, Th2 cells subsequently produce additional IL-4. IL-4 has many biological roles, including the stimulation of activated B-cell and T-cell proliferation, and the differentiation of CD4+ T-cells into Th2 cells. It is a key regulator in humoral and adaptive immunity. IL-4 induces B-cell class switching to IgE, and up-regulates MHC class II production. Overproduction of IL-4 is associated with allergies.
Form	Lyophilized without carrier protein.
Bio-activity	The biological activity of recombinant equine IL-4 was measured in a cell proliferation assay using the human TF-1 cell line. The ED50 for this effect is typically 40-60 ng/mL.
Molecular Mass	Equine IL-4 has a predicted molecular weight of 12.8 kDa.
