| <b>Description</b>      | <p>Seprase, also known as 170 kDa melanoma membrane-bound gelatinase , Fibroblast activation protein alpha, Integral membrane serine protease and FAP, is a single-pass type II membrane protein which belongs to the peptidase S9B family.</p> <p>Seprase/FAP is found in cell surface lamellipodia, invadopodia and on shed vesicles. Seprase/FAP appears to act as a proteolytically active 170-kDa dimer, consisting of two 97-kDa subunits. It is a member of the group type II integral serine proteases, which includes dipeptidyl peptidase IV (DPPIV/CD26) and related type II transmembrane prolyl serine peptidases, which exert their mechanisms of action on the cell surface. Seprase/FAP col centrifugealized with DPP4 in invadopodia and lamellipodia of migratory activated endothelial cells in collagenous matrix.</p> <p>Seprase/FAP col centrifugealized with DPP4 on endothelial cells of capillary-like microvessels but not large vessels within invasive breast ductal carcinoma. DPP4 and seprase exhibit multiple functions due to their abilities to form complexes with each other and to interact with other membrane-associated centrifugealized molecules. In ass</p> |

centigrade with DPP4, Seprase/FAP is involved in the pericellular proteolysis of the extracellular matrix (ECM), the migration and invasion of endothelial cells into the ECM. Seprase/FAP has a dual function in tumour progression. The proteolytic activity of Seprase has been shown to promote cell invasiveness towards the ECM and also to support tumour growth and proliferation. Seprase/FAP may have a role in tissue remodeling during development and wound healing, and may contribute to invasiveness in malignant cancers.

protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

**Storage Buffer**

Lyophilized from sterile PBS, pH 7.4. Normally 5%-8% trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.

**Reconstitution**

It is recommended that sterile water be added to the vial to prepare a stock solution of 0.2 µg/µL. Centrifuge the vial at 4 centigrade before opening to recover the entire contents.

**Conjugation**

FITC

## GENE INFORMATION

**Gene Name**

FAP fibroblast activation protein alpha [ *Macaca mulatta* (Rhesus monkey) ]

**Official Symbol**

FAP

**Synonyms**

FAP; fibroblast activation protein alpha; prolyl endopeptidase FAP; EC 3.4.14.5; EC 3.4.21.26

**Gene ID**

701541

**mRNA Refseq**

XM\_015110238

**Protein Refseq**

XP\_014965724
