Form	Lyophilized from sterile PBS, pH7.4, containing 5% Trehalose.
Bio-activity	Renin is an enzyme that plays a crucial role in the regulation of blood pressure and electrolyte balance by activating the renin-angiotensin-aldosterone system (RAAS). It is secreted by the kidneys in response to low blood pressure or low sodium levels. The activity of recombinant human REN is measured by its ability to cleave a fluorogenic peptide substrate Arg-Glu(EDANS)-Ile-His-Pro-Phe-His-Pro-Phe-His-Leu-Val-Ile-His-Thr-Lys(dabcyl)-Arg in the assay buffer 50 mM Sodium Acetate, 150 mM NaCl, 2 mM EDTA, pH 5.0. Recombinant human REN was diluted to 200ug/ml in the activation buffer 5 mM Tris, 15 mM NaCl, 1 mM CaCl₂, 0.005% Brij-35, pH 7.5, then activated by Trypsin in a final concentration of 4ug/ml incubated at 37°C for 1 hours. Stop activation with PMSF at 1 mM and incubate at room temperature for 30 min. The activated rhREN is diluted to different concentrations in assay buffer. Loading into a black well plate 50 μ rhREN and start the reaction by adding 50 μ of 20 μM substrate, with a substrate blank containing 50 μ assay buffer, 50 μ substrate, and no rhREN.
