

Recombinant Hepatitis B Surface Antigen, HBsAg-subtype Ad

Cat. No. S-011 Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Hepatitis B Surface Antigen, HBsAg-subtype Ad full length or partial length was expressed.
Source	Insect Cells
Antigen Description	Infectious Diseases
Description	The large envelope protein exists in two topological conformations, one which is termed 'external' or Le-HBsAg and the other 'internal' or Li-HBsAg. In its external conformation the protein attaches the virus to cell receptors and thereby initiating infection. This interaction determines the species specificity and liver tropism. This attachment induces virion internalization predominantly through caveolin-mediated endocytosis. The large envelope protein also assures fusion between virion membrane and endosomal membrane. In its internal conformation the protein plays a role in virion morphogenesis and mediates the contact with the nucleocapsid like a matrix protein.
Form	Liquid. 20 mM Phosphate Buffer Saline, pH 7.4.
Purity	>90%
Applications	ELISA
Notes	This product is intended for research and manufacturing uses only. It is not a diagnostic device. The user assumes all responsibility for care, custody and control of

the material, including its disposal, in accordance with all regulations.

Storage 2-8 centigrade.Do not freeze.

GENE INFORMATION

Gene Name S large envelope protein;middle envelope protein;small envelope protein [Hepatitis B virus]

Official Symbol S

Synonyms HBVgp2

Gene ID 944569

Protein Refseq YP_009173869

UniProt ID P03140

 Tel: 1-631-559-9269 1-516-512-3133
