

Recombinant Human CAV3 protein, Myc/DDK-tagged

Cat. No. CAV3-011H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CAV3 protein, fused to Myc/DDK-tagged, was expressed in HEK293T. Protein Families: Druggable Genome, Transmembrane. Protein Pathways: Focal adhesion.
Species	Human
Source	HEK293
Description	This gene encodes a caveolin family member, which functions as a component of the caveolae plasma membranes found in most cell types. Caveolin proteins are proposed to be scaffolding proteins for organizing and concentrating certain caveolin-interacting molecules. Mutations identified in this gene lead to interference with protein oligomerization or intra-cellular routing, disrupting caveolae formation and resulting in Limb-Girdle muscular dystrophy type-1C (LGMD-1C), hyperCKemia or rippling muscle disease (RMD). Alternative splicing has been identified for this locus, with inclusion or exclusion of a differentially spliced intron. In addition, transcripts utilize multiple polyA sites and contain two potential translation initiation sites.
