

Recombinant Human COL1A1 protein, His-tagged

Cat. No. COL1A1-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human COL1A1 protein, fused to His-tag, was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	1464 aa
Description	This gene encodes the pro-alpha1 chains of type I collagen whose triple helix comprises two alpha1 chains and one alpha2 chain. Type I is a fibril-forming collagen found in most connective tissues and is abundant in bone, cornea, dermis and tendon. Mutations in this gene are associated with osteogenesis imperfecta types I-IV, Ehlers-Danlos syndrome type VIIA, Ehlers-Danlos syndrome Classical type, Caffey Disease and idiopathic osteoporosis. Reciprocal translocations between chromosomes 17 and 22, where this gene and the gene for platelet-derived growth factor beta are located, are associated with a particular type of skin tumor called dermatofibrosarcoma protuberans, resulting from unregulated expression of the growth factor. Two transcripts, resulting from the use of alternate polyadenylation signals, have been identified for this gene.

Purity > 95 %

Storage Store at -20 centigrade to -80 centigrade

Storage Buffer PBS, pH 6.8

GENE INFORMATION

Gene Name COL1A1 collagen type I alpha 1 chain [Homo sapiens (human)]

Official Symbol COL1A1
