

Recombinant Human COL1A2 protein, His-tagged

Cat. No. COL1A2-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human COL1A2 protein, fused to His-tag, was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	1366 aa
Description	This gene encodes the pro-alpha2 chain of type I collagen whose triple helix comprises two alpha1 chains and one alpha2 chain. Type I is a fibril-forming collagen found in most connective tissues and is abundant in bone, cornea, dermis and tendon. Mutations in this gene are associated with osteogenesis imperfecta types I-IV, Ehlers-Danlos syndrome type VIIB, recessive Ehlers-Danlos syndrome Classical type, idiopathic osteoporosis, and atypical Marfan syndrome. Symptoms associated with mutations in this gene, however, tend to be less severe than mutations in the gene for the alpha1 chain of type I collagen (COL1A1) reflecting the different role of alpha2 chains in matrix integrity. Three transcripts, resulting from the use of alternate polyadenylation signals, have been identified for this gene.

Purity > 90 %

Storage Store at -20 centigrade to -80 centigrade

Storage Buffer PBS, pH 6.8

GENE INFORMATION

Gene Name COL1A2 collagen type I alpha 2 chain [Homo sapiens (human)]

Official Symbol COL1A2

Synonyms OI4; EDSCV; EDSARTH2
