Description	Alkaline phosphatase (AP) is conjugated to Galanthus nivalis Lectin (GNL/GNA) to show the binding of GNL/GNA in many applications including Western blotting and ELISA. Alkaline phosphatase is a large protein (140 kDa) that catalyzes the hydrolysis of phosphate groups from a substrate resulting in a colored or fluorescent product. The optimal enzymatic activity of this protein is between pH 8 and 10, and its reaction rate remains linear, improving sensitivity over time.
