Species	Elderberry
Source	Elderberry
Description	Cy5, when bound to Sambucus nigra Lectin (SNA/EBL II), can show the binding pattern of this lectin in cellular imaging and flow cytometry. The excitation wavelength required for Cy5 to fluoresce is high enough to avoid overlap with most other fluorochromes, making it useful for dual-labeling experiments. Because of this high excitation, there is typically less background from autofluorescence of biological specimens.
