

Native Soybean seeds Glycine max Lectin (SBA), MagneZoom™-Conjugated

Cat. No. SBA-418S Lot. No. (See product label)

SPECIFICATION

Product Overview	Native Soybean seeds Glycine max Lectin (SBA) - MagneZoom™ Blood Group Specificity: Non-specific Preferred Sugar Specificity: α - β GalNAc Mitogenic Activity: No Hazardous Shipping: Non-hazardous
Species	Soybean seeds
Source	Soybean seeds
Description	Glycine max agglutinin (SBA) is isolated and purified by affinity chromatography. It consists of four subunits of identical size. SBA has specificity for blood groups A1, A2, and B, and interacts better with neuramidase-treated cells than untreated cells. This lectin has selective affinity for lymphocytes and human CD34+ hematopoietic stem cells. Immobilized conjugates of SBA are important tools for removing T-cells in bone marrow transplants. Affinity purified Glycine max (Soybean) Lectin (SBA) is immobilized on aminated paramagnetic beads using EDC and stabilized in a buffer to retain maximum activity. These beads are ideal for IP applications to pull down glycoproteins.
Form	Liquid
Purity	High Purity Grade

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Stability	Shelf Life: 1 year
------------------	--------------------

Storage	At 2-8 centigrade.
----------------	--------------------

GENE INFORMATION

Official Symbol	SBA
------------------------	-----

Synonyms	Glycine max Lectin; SBA
