

Active Recombinant Rat NTRK1 protein, His-tagged

Cat. No. NTRK1-03R **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Rat NTRK1 protein, fused to His-tag, was expressed in HEK293.
Species	Rat
Source	HEK293
ProteinLength	35-418aa
Description	TrkA, also known as Tyrosine kinase receptor A, is a member of the neurotrophic tyrosine kinase receptor(NTKR) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. It leads to cell differentiation and may play a role in specifying sensory neuron subtypes. It has a crucial role in the development and function of the nociceptive reception system as well as the establishment of thermal regulation via sweating. In one study conducted on two rat models, an inhibition of TrkA with AR786 led to a reduction in joint swelling, joint damage, and pain caused by inflammatory arthritis. Recombinant rat TrkA, fused to hIgG-His-tag at C-terminus, was expressed in HEK293 cell and purified by using conventional chromatography techniques.
Form	Liquid. In Phosphate-Buffered Saline (pH 7.4) containing 10% glycerol.
Bio-activity	Measured by ability to inhibit NGF-induced proliferation assay using TF-1 human erythroleukemic cells in the presence of 0.5ng/ml of rat NGF. The ED50 range $\leq$ 5 ng/ml.
